

What is claimed is:

1. An improved transparency scanning module, which is applied on a cover of scanning device, and the transparency scanning module is installed on the cover, wherein, the features are:
 - 5 the transparency scanning module is embedded in the cover, a slot of cover for holding transparency scanning module is set plural power connectors, and there are plural connectors set on the relative positions of transparency scanning module for connecting each other.
- 10 2. The improved transparency scanning module as cited in claim 1, wherein rim of transparency scanning module is thinner, and most central part is protruding in z direction.
3. The improved transparency scanning module as cited in claim 1, wherein the plural power connectors on cover and the plural connectors can be connected and taken apart at any time.
- 15 4. The improved transparency scanning module as cited in claim 3, wherein, after power connectors connecting with connectors, transparency scanning module is able to supply light.
5. The improved transparency scanning module as cited in claim 4, wherein, transparency scanning module is able to scan transparent document and general document.
- 20 6. The improved transparency scanning module as cited in claim 3, wherein, transparency scanning module and cover are combined and fixed after power connectors connecting with connectors.
